

Universal Panel Saw Type TPS

Available in 5 sizes and cuts up to 210 cm in width and 305 cm in length

The BMI panel saw has made it possible to cut panel safe and easy in better working positions. Universal, precise and simple are the keywords for the BMI panel saw. In addition the saw fulfils many other demands about flexibility and safety that makes it the perfect saw for professionals

You can saw:

Chip Boards
Plywood
Block Boards
Laminated Boards
MDF Boards
Masonite Boards
Acrylic Boards
Polycarbonate
Foamed PVC
Thin Alu. Boards

Flexibility and Safety:

The unique tilt function makes it very easy to change from vertical to horizontal position.

The horizontal position is particularly suitable for length cutting of material up to approx. 100 cm wide.

There is no pressure on the blade and the cut off material is easy to get to.

The position also makes the panel saw a potential extra mounting table.

Tip Function:

The tip function of the BMI panel saw puts an end to bad working positions. Furthermore the risk of injure from the saw itself is minimized due to the fact that you do not hold the board, but the saw.

The BMI Panel Saw shown in horizontal position.
