* Standard Knives

* Reversible Knives

MORSØ Mitring Machine F Plus Ten - foot operated

MORSØ-F plus Ten cuts double mitre at 45° and single mitre up to 90°. Tenon, mortise joints and a wide variety of angled cuts can also be made.

The latest machine in the Morso range is the manually operated Morso F plus Ten, which works after the same principles as the Morso F. The difference is that the height of the working table has been raised by 100 mm (4"). Very important: the working height of the foot pedal is still the same, compared to the standard Morso F. Especially for taller people the change of height makes the Morso F plus Ten extremely more convenient and ergonomic to work with. Operators working the machines more than 1 hour a day needs the best possible working conditions and this has now been achieved with the extra height.

The Morsø F plus Ten cuts hard wood, soft wood, plastic and MDF.

The main features of the Morso F plus Ten are as follows:

- Manually operated – no compressor or electricity needed
- Ergonomic working height
- Dust free operation
- Noiseless operation
- Superb finish – exact 45 degrees cut no extra preparations needed before joining
- Built to last for generations

The MORSØ F plus Ten is delivered with:

Automatic rebate support system, left hand extension table, safety guard, waste chute, sliding longitudinal stop, measuring scale up to 1500 mm (available to 2500 mm upon request), adjustable fences, and adjustable rebate supports.
